Sys.tm®: Bring Information to Life

How much time and money would better information management save your business? Sys.tm provides all the power of the world's best information management and task automation in an easy-to-setup, easy-to-use product that offers you the ability to customize available features and pay only for what you actually use

Leverage Powerful Information Management that Automates Routine Tasks

- Speed business with straight-forward, secure information management across your enterprise.
- Rest easy with best-in-class data security gleaned from more than 25 years providing cloud information management.
- Automate routine tasks using Robotic Process Automation (RPA) that is easy to setup and easy to afford.

### Gain User Acceptance with an Easy-to-Use Product that Adapts to the Ways You Already Work

- Simplify every document task by embedding content management within your familiar Windows environment.
- Automatically ingest files from devices, networks, and individual hard drives.
- Streamline user experience by presenting only the features and capabilities each person needs.

### Save Money with the Most Flexible, Affordable Product on the Market

- Trade expensive capital hardware and software licenses for an easy-to-pay monthly operating expense.
- Turn on and off features as needed to streamline user experience and pay only for what you need.
- Take advantage of usage-based billing on select services to fine-tune costs to exactly match what you use.

Sys.tm®: An Intelligent Information Management Platform

Traditional file management locks information away in boxes or complex electronic structures, making it hard to access and difficult to secure. From the moment you turn it on, Sys.tm is different. You can ingest and organize your files automatically— no time-consuming uploading required. Those documents can then be used anywhere by anyone on any device without compromising security and easing collaboration both within your company and with other business partners. Sys.tm brings your business information to life.

Recognize Faster ROI Because Sys.tm is Easy to Use

Sys.tm integrates content management directly into your Windows® file system environment for easy organization and straightforward search. The easy-to-use platform speeds user adoption leading to faster Return on your Investment (ROI). Even the views are customizable allowing individual users to more quickly access important information. You can also directly import scanned documents from PaperVision® Capture, so all your business records are in one place.

Do More than Just Manage Information

The Sys.tm platform offers more than smart information management. Once ingested, data can be extracted from documents and sent to other business applications. You can use Robotic Process Automation (RPA) to automate a huge array of routine business tasks. Sys.tm will even deliver information to where it's needed for smart decision-making across your organization.

Pay Only for What You Use

Did you know as much as 80% of the features in the average software product are rarely or never used?[1] Yet traditional technology billing forces all users into the same license fees or cloud services tiers. Sys.tm revolutionizes the way companies buy technology using a microservices architecture that allows features to be turned off when not needed to save money. In addition, microtransactions-based billing on select services exactly matches your cost to how much you use the capability.

Gain More Flexibility and Scalability to Meet Changing Needs

Sys.tm is designed to help organizations flexibly meet changing needs in today's dynamic business environment. Not only can you customize capabilities to match evolving business needs, but Sys.tm also dynamically scales to process even the biggest jobs as quickly as needed.

Safeguard Documents and Data with End-to-End Security

You'll love the flexibility and detailed nature of the data security controls available in Sys.tm. Suitable for even the most sophisticated regulatory environments, Sys.tm administrators can control access to information by user or group, and even limit what each person can do with the information according to their job tasks. Activity logs, audit trails, encryption, multi-factor authentication, and more ensure your cyber security.

> *"Sys.tm brings business information to life. Instead of languishing in boxes, critical data is securely managed and safely accessible to workers in a user-friendly, automated platform. Best of all, information doesn't just sit waiting to be used. Rather, companies can extract data, automate tasks, comply with regulations, and much more within the Sys.tm environment. It's the most significant development in information management in the last fifty years!"*
