

How Will Sys.tm Microservices Change Your Business?

Digitech Systems' new Sys.tm[®] cloud services platform uses microservices and microtransactions-based pricing to simplify how information management and automation tools are purchased and delivered.

The following is a roundup of what technology experts are saying about the value of these technologies in simplifying complex systems, delivering personalized experiences to end users and accelerating cloud software development.

Why Do Microservices Matter?

Microservices: A style of software architecture in which developers build components of code that can be repurposed across an array of products. Small, affordable feature bundles can be combined and re-combined to form custom solutions as your technology needs change.

Microtransactions-based billing: A billing model where you pay only for the amount features are actually used. Technology advances enable microservices providers to keep precise tabs on the specific services used to calculate payments.

"Microservices are business-driven, service-specific applications that can be scaled quickly and cheaply with high performance and availability across public and private clouds."¹
- **Claus Jepsen, CTO, Unit4**

"Overall, research shows that more organizations are moving to a cloud-native approach that makes microservices fundamental; most consider the challenges of finding talent and coming up to speed with evolving technology worth the commitment to overcome."² - **IBM**

Improve User Experience with a Fully Customizable Solution

"More than twice the number of consumers say that the best way to improve the user experience is by offering fully end-to-end digital services—including services offered after the sale—with less friction along the way."³ - **McKinsey**

"We are in the midst of an application development and IT system management revolution driven by the cloud. Fast, agile, inexpensive, and massively scalable infrastructure, offered fully self-service and with pay-as-you-go billing, is improving operational efficiency and enabling faster-time-to-value across industries."⁴ - **Mark Russinovich, CTO, Microsoft Azure**

How Will Sys.tm Microservices Change Your Business?

Increase Savings with Pay-as-you-go and Usage-based Pricing

"Cost savings: Cloud-native applications take advantage of the pay-as-you-go model and commitment consumption model of cloud computing, reducing the costs of infrastructure and maintenance compared to traditional, on-premises solutions."⁵ - **Oracle**

"Rather than spending money to maintain hardware that often goes unused, subscribing to software and services for a low monthly fee can help small businesses stretch their budgets further."⁶ - **American Express**

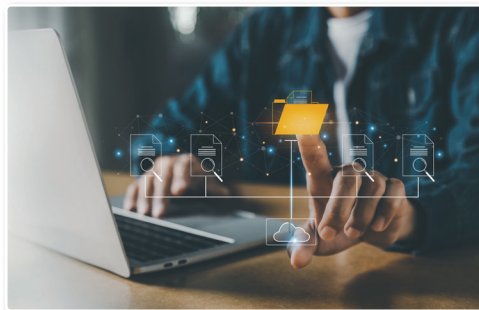

"With usage- or consumption-based pricing ... customers are given the latitude to modulate their usage with companies measuring that usage and billing accordingly... Beyond a pricing or revenue model, consumption now becomes the focus of every corner of a company, committed to making customers successful and recipients of true value from their products and/or services. A real win-win."⁷
- **Nishant Nair, CEO, RecVue, Forbes Council Member**

Invest In a Product That Protects the Future of Your Business

Users will develop an established relationship with Sys.tm as a familiar product while Sys.tm's available services continue to grow. This allows users to benefit from all new capabilities without experiencing the learning curve of an all new product.

"User-friendly interfaces enhance our digital experiences in profound ways, making tasks simpler, navigation more intuitive and accessibility to information virtually seamless."⁸
- **Acima.com**

Ready to Get Started with Sys.tm?

Get the benefits of microservices and usage-based pricing with Sys.tm, a next-generation information management and automation services platform developed by Digitech Systems, an industry leader of more than 26 years.

Get a **30 day free trial** for a limited time at www.sys.tm/signup.
